

## WHAT IS THE PRIVATE SALE FOR ?

DGT.LZ platform relies on the amount of liquidity it manages, the more we have, the more profits. It is important to highlight that our strategies offer high returns combined with a risk close to 0, but requires a lot of investment and liquidity.

We seek an investment for around 350BNB ( or equivalent to 200 000USD), with allocation of 50BNB for 10 early investors .

From those 200 000USD raised, we will affect 50% for the development and 50% as liquidity stacked in the project as initial liquidity.

Our rewarding strategy for seed investors will be the following:

- Capitalization raised by 10% from the capital invested for the 50% used in development (10% more tokens)
- A buying price discounted by 25% compared to pre-sale price
- Management of the other 50% free of charge for as long as tokens are not sold (minimum 6 months)

About development funds, we estimate the costs as following :

- Website migration, contract development	12 000USD
- Bot integration	15 000USD
- Legal fees/accounts	7 000USD
- Marketing on and off chain	45 000USD
- Audit by Certik/Rugdoc	13 000USD
